Tailored Solutions Announces New Litho Traxx™ Module For Fulfillment Management

When your customers want you to manage jobs all the way through warehouse and release of printed work do you walk away? Or do you want to keep those profits in house and manage your customer's projects efficiently and effectively? With the Litho Traxx job management software Fulfillment Module in place now you can!

The Litho Traxx Fulfillment module includes all elements of the fulfillment process which printers need to handle the complex details involved in assembling, mailing and storing their clients' products. Whether it's holding 50 boxes of brochures for shipping later to multiple locations, or building a box that contains a binder with a complex assortment of tabs, product sell sheets and premium items for one store, you can count on the Litho Traxx Fulfillment Module to keep you organized:

- Manage finished goods inventory levels and reorder points
- Set specifications for specialty client kits
- Create job orders and picking slips
- Track items your client sends you for kit creation
- Maintain accurate inventory records
- Capture freight charges for each release
- Track handling changes
- Customers can check inventories via the web

-more-

“We recognized a growing need for medium-sized commercial printers to have a fulfillment job management solution,” said Ken Meinhardt, president of Tailored Solutions. “Our customers confirmed that development of a full-featured Fulfillment Module would enable them to take full advantage of this business opportunity without burdensome administrative costs.”

The Fulfillment Module completes the suite of Litho Traxx job management software modules: Estimating, Order Processing, Invoicing and Job Costing. “One of the most powerful features of Litho Traxx, is that our modules are all-encompassing,” said Meinhardt. “That means for example, that the Estimating Module includes everything needed to efficiently and effectively manage the estimating process, from customer contact management, through shop standards, through complete prepress and printing estimating. Litho Traxx has it covered.”

Tailored Solutions, Inc., is a software solutions company, located in Milwaukee, Wisc., specializing in the development of job management software systems, which are written in the relational database language 4th Dimension, for the prepress, sheetfed offset and narrow web flexographic printing industries.
